KiqStat revenue statement, October 2026 (checklist 2.1)

Same-period statement. Cash basis, from the payments table, 5 Nov 2026

Headline

October 2026 collected **₦77,250** from real customers (₦77,750 including the ₦500 founder test pass, which is still to be refunded). **About ₦76,700 reached us** after the Paystack fees we ourselves paid (₦574; see the reconciliation below). That is 13 paid orders from 43 people who tried to pay.

Against the fixed running costs in `docs/pricing.md` (about ₦95,000 to ₦108,000 a month once Vercel Pro, Supabase Pro and the data feed are all paid), October was **about ₦18,000 to ₦31,000 short**. The founder has chosen to treat the cost range as the real figure, so no invoices are needed to close item 2.2.

Reconciliation against Paystack (6 November)

The Paystack export for 1 to 31 October (72 rows, 3 of them our own `@kiqstat.app` test checkouts, left out) matches the payments table exactly: **14 successful payments, ₦77,750, the same amounts and the same people**. No successful charge is missing from our records.

Paystack, October	Count	Amount (₦)
Successful	14	77,750
Abandoned (buyer left checkout)	53	
Failed	1	
Reversed by the card issuer	1	12,000 (the 24 October VIP renewal, never kept)

- **Fees:** Paystack charged ₦2,393.60 on the 14 payments, but from 19 October the checkout adds the fee to what the customer pays (₦5,177.67 for a ₦5,000 plan), so **we paid only ₦573.75 of it** (four payments before the change) and received the full price on the ten after. My earlier estimate (₦2,359) was too high; real money in the bank is ₦77,176.25, or **₦76,676.25 from real customers** excluding the ₦500 test.
- **The 24 October renewal:** Paystack did charge the member on 24 October at 1:15 PM and then the card issuer **reversed** it ("Approved by Financial Institution", status reversed). No money was kept, so nothing was lost and no webhook failed. The earlier "missed renewal" was a reversed charge. The daily subscription check now says so.
- **Payment method:** card checkouts were 48 attempts and 2 successes (4%); bank and bank-transfer checkouts (OPay, PalmPay, others) were 21 attempts and 12 successes (57%). No card payment has succeeded since 8 October (0 of 25 attempts after 19

October). Most card failures read “The transaction was not completed”: the buyer opened the card form and left.

October by plan (cash received, successful payments only)

Plan	Orders	Price each	Collected (₦)	Est. Paystack fee (₦)
Pro monthly, recurring	2	5,000	10,000	350
Pro monthly, one-off	7	5,000	35,000	1,225
VIP monthly, recurring	1	8,000 (old price)	8,000	220
VIP monthly, one-off	2	12,000	24,000	560
Day pass	1	250 (old price)	250	4
Real customers	**13**		**77,250**	**2,359**
VIP day pass (founder test, 31 Oct)	1	500	500	8
Total in the payments table	**14**		**77,750**	**2,366**

Net of the fees we paid, real customers: **₦76,676** (Paystack’s own settlement figures; the fee column above is the earlier estimate, and the real fee we bore was ₦574 because the customer pays it from 19 October).

Revenue split by type: one-off monthly purchases are **76%** of October cash (₦59,000); recurring subscription charges are 23% (₦18,000); passes are under 1%.

The last four months

Month	Sign-ups	People who tried to pay	Paid orders	Failed or abandoned	Collected (₦)
August	2	1	1	1	700
September	24	10	3	16	13,400
October	216	43	14	65	77,750
November (to 5th)	21	9	4	9 (+2 pending)	13,500

September and August amounts include the old ₦700 Week pass and the first ₦12,000 VIP charge. November so far is three ₦500 VIP day passes (₦1,500) and one ₦12,000 VIP one-off, with two checkouts still pending.

Other money lines

- **Partner commissions:** none recorded, no partner has earned yet, so no commission cost in October.
- **Gifts:** 12 VIP gifts exist. They bring in nothing and are not counted as revenue.
- **Refunds:** none recorded in the payments table. The ₦500 test pass (31 Oct) is the only one planned (checklist 1.4).
- **Foreign cards:** every Flutterwave attempt (8 in October, 2 in November, in USD and GHS) failed. Nothing was collected in a foreign currency.
- **AI cost:** Ask KiqStat cost about **$0.004 in October** (10 calls) and $0.022 in November so far (58 calls), all on Haiku 5.5. At ₦1,550 to the dollar that is under ₦6 in October. The AI is not a material cost at today's volume.

What this tells us

1. **Revenue is real but small, and mostly one-off.** Nine of the 13 real orders were one-off monthly purchases, not subscriptions that renew. Only three recurring charges happened in October, so there is almost no repeating revenue yet.
2. **Checkout loses most buyers.** In October 65 payment attempts failed or were abandoned against 14 that succeeded (18% success by attempt). Some of that is people closing the window, but a share is cards declined, and every foreign-card attempt failed. Finding the reasons (Paystack declines versus abandoned) is the cheapest revenue gain available.
3. **Break-even needs about 30 Pro-equivalent subscribers a month.** October had 13 paid orders and 3 repeating ones.

Limits of this statement

- Cash basis. A ₦5,000 monthly charge is counted in the month it was paid, not spread over the month it covers.
- Checked against the Paystack export: nothing missing (see the reconciliation).
- Fees are Paystack's actual figures (export of 6 November).
- Costs are the estimated range in `docs/pricing.md`, accepted as the real figure by the founder.
