KIQSTAT | INVESTOR BRIEF

Football predictions people can check

An introduction to KiqStat, operated by Betrix Data Technologies Ltd, Nigeria · November 2026 · Draft for CTO review

In one paragraph

KiqStat is a football prediction and analytics platform for fans in Nigeria and across Africa. A statistical model gives the chance of every result in 27 competitions free and publishes every settled pick, wins and losses, on a public track record. Paid plans (Pro from ₦5,000, VIP from ₦12,000) add more markets, a combo builder, a booking-code checker and an AI assistant. The business is three months old, has collected ₦105,850 from real customers, costs about ₦100,000 a month to run, and has a signup-to-payment funnel that converts at about 8%. We are looking for an investor who will take shares in the company and fund the marketing that turns that funnel into a business.

Stage	Product live since August 2026; paying customers since 21 August
Revenue to date	₦105,000 collected (Aug to 6 Nov 2026); October ₦77,250 from real customers
Users	266 accounts, 240 seen in the last 30 days
Monthly running cost	About ₦100,000 (fixed; estimate from current plans)
What we are asking	A shareholder investment of [amount, to be agreed] to fund 12 months of marketing and conversion work
Base-case outlook	Monthly revenue of about ₦590,000 by November 2027 (range ₦167,000 to ₦1.4 million), set out in section 8

All figures are from KiqStat's own database on 6 November 2026 unless a source is linked. Naira amounts are converted at ₦1,600 to the US dollar. Projections are scenarios built from stated assumptions, not forecasts.

1. The opportunity

Football is the most followed sport in Nigeria and betting on it has become a mass habit. Nigerians now look for guidance before they stake, and most of what they find cannot be checked.

- **A large, connected audience.** DataReportal counts 109 million internet users in Nigeria at the end of 2025. KPMG and Orange put smartphone ownership at 75%.
- **A big betting market, with unreliable counts.** Estimates put Nigerian betting revenue near US$3.6 billion a year, most of it sport. Counts of bettors range from 8 million to over 60 million depending on the source, so we do not rely on any one.
- **Advice that cannot be verified.** A 2026 study of 5,467 tips from three Nigerian betting influencers on X and Telegram found an average return of minus 25% on their own tips and minus 38% for a follower staking equally (an unreviewed preprint, reported by Focus Gaming News). Tips are free and loud; accountability is rare.
- **Paid advertising is closed to us.** Google banned gambling ads in Nigeria from January 2025, including betting tips (a later reversal for Lagos has been reported but not confirmed). Growth has to come from social media, content, search and partners, which suits a product built to be shared.

2. What KiqStat is

KiqStat turns real results into probabilities and shows its work. Every prediction comes from one statistical goal model (a time-weighted Dixon-Coles model) fitted on completed matches, so the match result, over/under, both

teams to score and correct score never contradict each other. When the data is too thin, KiqStat publishes no pick rather than guess.

Feature	What it does	Plan
Predictions	Win, draw, loss and every other market for every match, with the evidence behind it	Free in 27 competitions; Pro for 15 further leagues before kick-off
Public track record	Every pick settled automatically against the final score, wins and losses, with sample sizes	Free
Market check	Compares the model's chance with the bookmaker price to show where a price is generous	Pro
Forge	Builds a combo and shows the true chance of the whole slip, not only the odds	Free (5 a day), Pro
Code Hub	Checks any booking code leg by leg, makes it safer, builds new codes	Free to check; Pro and VIP for more
Ask KiqStat	An AI assistant that answers from the model's own numbers (about ₦3 a question to run)	3 a day free, 30 Pro, 80 VIP
Partner programme	Creators earn a share of what the customers they bring pay, for 12 months	Commission only

Pricing in naira, paid by bank transfer, OPay, PalmPay, USSD or card. Pro is ₦5,000 a month (about US$3.10); VIP is ₦12,000 (about US$7.50); a ₦500 VIP day pass is the entry offer. International AI prediction apps in the app stores charge US$13 to US$20 a month, four to six times KiqStat's Pro price.

Evidence of quality. Since 22 August 2026 the model has settled 1,523 headline picks. 1,098 won and 421 lost, a 72% hit rate (4 were neither). That number flatters, because many picks are high-probability markets, so we do not sell it as a return. We test calibration instead: on a holdout of 7,306 games, shots, corners and team-goal picks the model rated 70% to 85% landed between 71% and 79% of the time, close to what it claimed. The public track record page shows the current figures at all times.

3. How the business is run

Operations and technology

- **Product and platform.** A web application on Vercel, a Supabase (Postgres) database, Paystack for payments, and Anthropic's Claude (Haiku) for Ask KiqStat. Match data comes from TheSportsDB and FotMob. The code is in a private GitHub repository with automatic tests (over 1,300 pass), type checks and lint on every change.
- **Controlled change.** Work goes through a development branch and is released to production by the founder. A CTO review on 4 November produced a 25-item checklist across production safety, finances, AI cost, growth and partner terms; 17 items are closed and 4 more are in hand.
- **Safeguards that run on their own.** Daily checks of every card subscription against Paystack, recovery of any payment whose notification was lost, a spending cap and daily margin alerts on the AI assistant, and a weekly encrypted off-site database backup that is restored into a scratch database and compared with production (a test on 6 November matched on all seven tables).
- **How we find out what works.** Every signup carries its source; the admin shows revenue by source, conversion by plan and checkout success by payment method. That is how we found that bank transfer succeeds 57% of the time and card 4% (section 4).
- **Compliance.** KiqStat is an analytics service. It holds no customer funds, takes no bets and is for adults only (18+). It has a responsible-use page, a published refund policy (7 days on a first payment, 48 hours on a renewal) and customer data handled under the Nigeria Data Protection Act.

People

[Founder: name, role and background]. [CTO: name, role and background]. [Any other team members, advisers or contractors, and whether founders are paid]. Engineering is accelerated by AI-assisted development, which is why a product of this breadth was built in under three months at this cost.

4. Where we are today

Month	Paid orders	Collected (₦)	Comment
August 2026	1	700	First paying customer, 21 August
September 2026	3	13,400	First ₦12,000 VIP purchase
October 2026	13	77,250	Excludes a ₦500 internal test; 9 one-off, 3 recurring
November 2026 (to 6th)	6	14,500	One VIP and five ₦500 day passes
Total	23	105,850	Cash received from real customers

- **Audience.** 266 accounts, 240 active in the last 30 days. Signups are real people (we checked every address and 74% returned after the visit they signed up in), not bot traffic.
- **Conversion.** 22 of the first 262 accounts have ever paid (8.4%). Of 61 people who reached checkout, 36% paid.
- **What checkout taught us.** Card payments succeed 4% of the time (2 of 48 attempts); bank and bank transfer succeed 57% (12 of 21). Buyers have paid Paystack's fee themselves on one-off purchases since 19 October, so a ₦5,000 sale brings in ₦5,000. We are moving bank transfer to the front of checkout.
- **Best source.** ChatGPT recommendations: 40 signups, 8 paying (20%), 43% of attributed revenue. Searches on Google send little so far (about 110 visitors a month); search and AI visibility is a funded priority (section 6).
- **A first paid test.** An X advertisement on 24 October brought 37 signups that day (10 from X), 7 of whom tried to pay and 2 paid ₦17,000. At that rate a signup is worth about ₦460 in first-month revenue; an advertisement that costs less than that per signup pays for itself. Cost of the test: **[ad spend]**.
- **Partners.** Two creators have signed a Partner Referral Agreement and a third is being onboarded; none has yet produced a paying customer.
- **What we have not proven yet.** Repeat purchase (no customer has bought twice), the real cost of a signup at scale, and whether people keep paying month after month. The first twelve weeks of funding are designed to answer exactly those.

5. What it costs to run

Fixed monthly cost	US$	₦
Vercel Pro (hosting; the free plan does not allow commercial use)	20	31,000
Supabase Pro with Small compute (database)	30	46,500
TheSportsDB premium (sports data)	9	13,950
Email sending (Sendbyte; ₦2,000 to ₦15,000 by volume)	1 to 10	2,000 to 15,000
Domain	1	1,500
Total	61 to 70	95,000 to 108,000

- **Variable costs are small.** An Ask KiqStat question costs about ₦3, so even a VIP member at the daily limit costs under ₦150. Paystack's fee is paid by the buyer on one-off purchases. Partners are paid 20% of net revenue from customers they bring, and nothing otherwise.
- **Break-even is about 19 to 22 Pro sales a month.** October had 13 paid orders. These are estimates from plan prices; the figures exclude any pay for the team.

- **Margins are healthy by plan.** At normal use every plan keeps 95% to 97% of its price after payment fees and the AI, and 75% to 77% after a 20% partner commission. Even if a customer used the AI to its daily limit every day, every plan still clears a 25% margin at a 20% commission.

6. Where we need an investor most

The product is built and the cost base is small. What the business lacks is a budget to put it in front of more people while the funnel is measured and improved. We propose to release funds in stages, each tied to a number that must be met before the next stage is spent.

Use of funds (12 months)	Illustrative ₦	Share	What it buys
Marketing	3,900,000	49%	X advertising and posting, football creators, WhatsApp and Telegram communities, content for search and AI answers, partner enablement
Conversion and payments	1,000,000	12%	Bank-transfer-first checkout, a mobile app wrapper, onboarding, emails and win-back flows
Company, legal and compliance	800,000	10%	Share allotment and shareholder agreement, advertising clearance, tax and data protection
Reserve	2,300,000	29%	Covers the cash need of the low case (about ₦3.8 million including marketing) with room to spare
Total	8,000,000	100%	About US$5,000. A larger raise would scale the marketing line once the cost per signup is proven

The amount and split are illustrative, sized from the projections below. They are for the founders and the investor to set.

How the money is released

- **Stage 1 (first 3 months, ₦300,000 of marketing).** Test channels on small budgets. Carry on only where a signup costs less than about ₦600 and first-month conversion is at or above 8%.
- **Stage 2 (months 4 to 6, ₦900,000).** Double the spend in the channels that passed; measure repeat purchase and renewal.
- **Stage 3 (months 7 to 12, ₦2.7 million).** Scale what is working. Report to the investor monthly against the figures in section 8.

Why marketing is the right use

Every number we can improve cheaply has been improved: the checkout, the costs, the tracking and the partner terms. What cannot be improved without money is reach. A football fan decides within one weekend whether to try a prediction service, and the services that win are the ones the fan sees first. Our best result so far, ChatGPT's recommendation, came without spend; X, creators and search are where spend multiplies it.

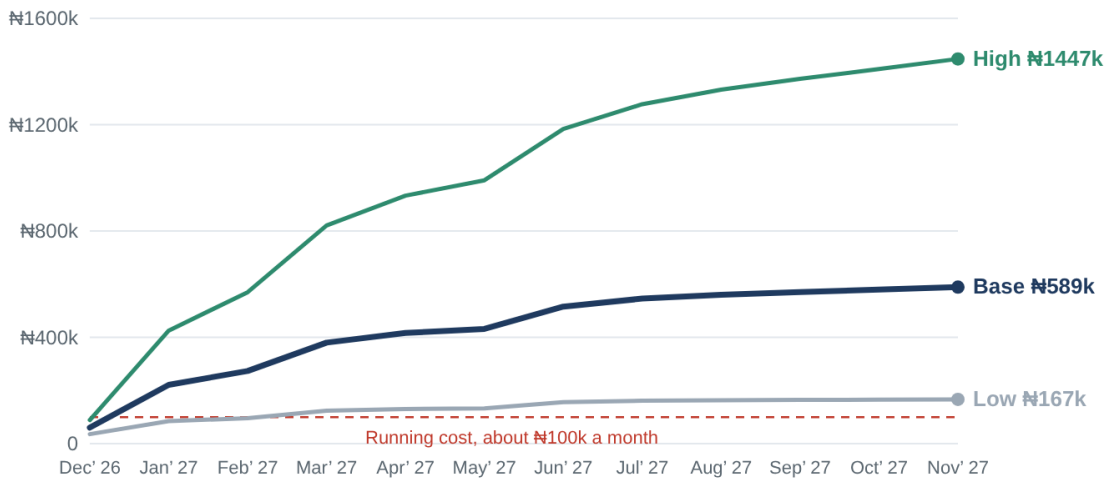

7. Goals

By	Goal	Measured by
Month 3 (February 2027)	Checkout success of 40% or more of attempts (about one in five in October); a channel with a signup cost under ₦600	Admin: checkout success by method, cost per signup
Month 6 (May 2027)	About ₦430,000 a month in revenue and about 75 paying customers; revenue above running costs in every month from January 2027	Payments table, active subscriptions
Month 12 (November 2027)	About ₦590,000 a month in revenue and about 100 paying customers on the base case; 8,000 signups in the year	Same
Product	A mobile app, more Pro leagues, Premier League and AFCON season content, and the partner programme running with at least ten active partners	Release notes, partner dashboard

By	Goal	Measured by
Shareholder reporting	A one-page monthly update to the investor: revenue, signups, conversion, cost per signup, cash	Delivered by the 10th of each month

8. Projected monthly revenue

The model starts from the funnel we have measured and applies the marketing ramp in section 6. All three scenarios use the same spend (₦3.9 million over the year) and differ only in how well it works.

Month	Low (₦)	Base (₦)	High (₦)
Dec 26	35,750	60,320	88,660
Jan 27	84,865	221,235	425,276
Feb 27	95,417	273,346	569,675
Mar 27	124,032	379,977	820,696
Apr 27	130,514	416,277	932,905
May 27	132,585	431,736	990,769
Jun 27	155,781	515,433	1,184,030
Jul 27	161,226	545,677	1,277,041
Aug 27	163,136	560,191	1,331,523
Sep 27	164,356	570,314	1,372,321
Oct 27	165,454	579,466	1,409,545
Nov 27	166,545	588,693	1,447,431
12 months	1,579,661	5,142,665	11,849,872

What each scenario assumes

Driver	Low	Base	High	Today
Free signups a month, organic	130 growing 2% a month	130 growing 6%	130 growing 10%	About 130
Cost of a paid signup	₦1,000	₦500	₦350	Not yet known
Signups who pay	5%	8%	11%	8.4%
Average payment	₦5,500	₦5,800	₦6,200	₦5,900
Paying customers who pay again next month	20%	30%	40%	Not yet seen

Driver	Low	Base	High	Today
Revenue per signup over their life	₦344	₦663	₦1,137	About ₦460 (first month)
Peak cash need, 12 months (marketing included)	₦3.8 million	₦0.7 million	About ₦24,000	

- Marketing spend only pays for itself when a signup costs less than the revenue it brings, which is **₦344 / ₦663 / ₦1,137** in the three cases. The staged release in section 6 stops spending where that is not true.
- Revenue is cash, in naira, from real customers. Costs include fixed running costs rising from ₦102,000 to ₦120,000, and 12% of revenue for partner commission and AI. **They exclude pay for the team and tax.**
- The base case is not profitable every month. It reaches monthly revenue of ₦589,000 against about ₦190,000 of running costs (including partner commission and AI) by the end of the year, with marketing still running at ₦450,000 a month, so it is close to break-even once marketing is counted.
- The high case needs checkout improvements and repeat purchase to work as hoped. The low case is what happens if neither does: revenue stays near ₦170,000 and marketing should be cut.

9. Competition

KiqStat competes for attention with free prediction sites, football apps, and, above all, tipsters on X and Telegram. The comparison below uses the best public figures we could find; most competitor numbers are self-reported.

Competitor type	Examples and scale	How KiqStat differs
Free global prediction sites	Forebet: 9.6 million visits in December 2025 and 14.9 million in October (Semrush); free and ad-supported	A settled public record with losses, markets in one model, naira checkout, booking-code and combo tools. Forebet's reach is the benchmark for what free can do
Nigerian prediction portals	Betensured, WinDrawWin, Fulltime-Predict, Betloy. Betensured says it has over 800,000 users (a payments partner's blog, self-reported) and offers free and premium plans (CB Insights); listicles repeat accuracy claims up to 90% with no evidence	We publish the record these sites do not. We cannot yet match their user numbers
Football apps	Sofascore: 40 million monthly users (self-reported), strong in Nigeria; FotMob: 21 million claimed. Both are ad-funded scores and stats	They own the audience's time; we own the question of what is likely to happen. A partner or acquirer, not a rival, if they stay out of predictions
Tipsters on X and Telegram	Large free followings: Mr Banks, Betting Prof, Duke of Lagos, others named by Pulse Sports; free booking codes, paid VIP channels	No grading and no losses shown; the study in section 1 found these tips lose money. We win the sceptical fan and give the creator a partner deal that pays when customers pay
International AI prediction apps	PitchIQ and AI Scorecast Pro at US$19.99 a month; WinAI at US$12.99 (app-store listings)	A quarter to a fifth of the price, built for Nigerian payment methods and leagues, a free tier that covers every competition
Bookmakers' own tools	SportyBet, Bet9ja and others let customers share booking codes and publish their own content inside their apps	They want you to bet; we want you to check first. Code Hub reads their codes, so they are a source of users, and a risk if they copy the idea

X specifically

X is where Nigerian football talk happens and where tipsters win and lose their following, so it is both our main competitor and our main channel. It is also the source Grok draws on most. Our plan is a daily factual post tied to a match page, tagged links to measure each post, a weekly screenshot of the track record, and creator

partnerships. KiqStat's own X account has **[followers and monthly impressions, to be added]**. The 14-day posting plan and captions are drafted; the first review of what X brings us (48 hours and 7 days) is built into stage 1.

Where we are weaker

- Small audience and brand; the competitors above have years of habit.
- Repeat purchase and retention are unproven.
- A young model: 11 weeks of live settled picks, though built on years of results.
- Reliance on third-party data feeds, with a plan to add sources.

10. Risks and how we handle them

Risk	How it is handled
Regulation of betting-related content is changing and now sits partly with the states	KiqStat takes no bets and holds no funds; adults only; responsible-use page; advertising reviewed by a legal adviser; copy rules that forbid promising wins
Paid advertising on Google is closed to betting content	Growth plan relies on social media, creators, content, search and AI recommendations, not search advertising
AI cost grows with use	Daily spend caps per plan, a daily margin alert and a cheap model; AI cost is under 1% of revenue today
Payment failures	Bank transfer promoted first; daily reconciliation with Paystack; recovery of lost notifications; a reversed card renewal was found and explained in October
Customers leave after one payment	Renewal reminders, yearly and quarterly plans, win-back emails; to be measured in stage 1
Founder and key-person dependence	Documented runbooks, tested backups, a CTO review process and automated tests; [to be completed with team plans]
Non-human traffic skews analytics	We report Nigerian, engaged traffic only: in the 30 days to 6 November only 2,376 of about 30,600 visitors were Nigerian people, who average 7.3 pages each

11. The proposed investment

We intend the investor to join as a shareholder of Betrix Data Technologies Ltd, the company that operates KiqStat, with a proper share allotment and written shareholder terms.

Item	Proposal
Company	Betrix Data Technologies Ltd, registered in Nigeria (RC [number])
Amount	[amount], illustrated in this brief at ₦8,000,000
Instrument	[New ordinary shares at an agreed valuation, or a SAFE or convertible note that converts to shares at the next round]
Shareholding	[percentage / valuation basis]
Release of funds	In stages against the milestones in section 6, or in one payment (to be agreed)
Rights offered	Monthly reporting; pre-emption on new shares; tag-along on a sale; [board seat or observer]; standard protections to be settled with counsel
Use of proceeds	As in section 6, reported monthly

How the share allotment works

- Both sides agree the terms in a term sheet, then a share subscription and shareholder agreement drafted or reviewed by a Nigerian corporate lawyer.

- The company passes the directors' and shareholders' resolutions the Companies and Allied Matters Act 2020 and the company's constitution require, issues the new shares, updates the register of members and files the return of allotment with the Corporate Affairs Commission. The investor receives a share certificate.
- SAFEs and convertible notes are used in Nigerian early-stage deals but are lightly regulated, so a priced share issue is cleaner for a first investor. Counsel should confirm the structure and any foreign-investor registration if the investor is outside Nigeria.

This section describes a process, not legal advice. Terms are to be settled with the investor and their counsel.

Sources

Third-party figures were checked against the source listed; several are self-reported by the company named or come from preprints and trade press and are marked so in the text. Internal figures are from KiqStat's database and Paystack's transaction export (6 November 2026).
