KiqStat on X: captions, posting sequence and tagged links

Checklist item 4.4 · drafted 6 November 2026 · **for the founder to approve before anything is posted**

What this is for

X has sent 16 signups and 1 payer in the whole life of the site (traffic report, 4.2). ChatGPT sent 40 signups and 8 payers. So X is not yet a buying channel; this pack is a two-week test of whether a steady, honest account can change that, with every link tagged so the result is measured and not guessed (4.5 reads it at 48 hours and 7 days).

It is deliberately modest: one post a day, no giveaways, no claims we cannot show on the Track page.

Rules every post follows

1. **No promise of winning.** KiqStat shows the chance a model puts on a result, not a certain outcome. Say “chance”, “model”, “price”, never “sure”, “banker” or “lock”.
2. **No bookmaker names in copy.** Say “booking code”. (The product itself supports SportyBet codes; the posts do not name them.)
3. **18+ and responsible use** on any post that shows picks or codes. Link `/responsible-use` in the pinned post and the bio.
4. **Numbers only from the Track page** on the day of posting, screenshot attached. Never a remembered or rounded-up figure.
5. **No post about a specific match result after it ends** unless it is on the Track page (no cherry-picking winners).
6. Nigerian advertising and gambling-promotion rules apply to betting content. The founder confirms these captions meet them before the first post; I have not checked the regulator’s current wording.

Tagged links

Every link back to the site carries `utm_source=x`. First-touch capture stores it on the signup, and Admin → Traffic → KiqStat signups shows it as `x / <medium>` next to what that source paid.

Pattern: `https://www.kiqstat.app/<page>?utm_source=x&utm_medium=<medium>&utm_campaign=nov26-test&utm_content=<post id>`

Medium	Where it is used
`bio`	link in the X profile (one fixed link, never changes)
`pinned`	the pinned post
`post`	an ordinary daily post

Medium	Where it is used
`thread`	links inside a thread
`reply`	a link dropped in a reply to someone else

Campaign is `nov26-test` for the whole two weeks so 4.5 can total the test; `utm_content` is the post ID below (P1 to P14) so each post can be compared.

Landing pages (chosen so a visitor lands on the thing the post is about, not the home page):

Post topic	Page
General / intro	`/`
How the chance is worked out	`/how-it-works`
Track record	`/football/track-record`
Today's picks	`/football/predictions`
Forge combo builder	`/football/forge`
Code Hub (booking codes)	`/football/code-hub`
Code editor	`/football/code-hub/editor`
Pricing	`/pricing`
Responsible use	`/responsible-use`

Example (P3): `https://www.kiqstat.app/football/track-record?utm_source=x&utm_medium=post&utm_campaign=nov26-test&utm_content=p03`

The site's `utmUrl()` helper (`src/lib/utm.ts`) builds the same links in code; for X posts they are pasted by hand.

The 14-day sequence

Post once a day at about **12:30 WAT** (lunch break, before the evening games) with one exception on match days: a second post 90 minutes before the biggest kick-off. Reply to at least two accounts a day who are already talking about the match you posted about; those replies are the only place `reply` links go. Days marked **(slide)** use the matching image from the 9-slide carousel.

Day	ID	Theme	Page
1	P1	Pinned: what KiqStat is, in one honest line	`/`
2	P2	A chance is not a promise (slide 1)	`/how-it-works`
3	P3	The Track page: every settled pick, wins and losses	`/football/track-record`
4	P4	Market check: model	`/football/`

Day	ID	Theme	Page
		chance against the price (slide 2)	`predictions`
5	P5	Forge: build a combo and see its real chance (slide 3)	`/football/forge`
6	P6	Weekend fixtures: what the model thinks of one match	match page
7	P7	Code Hub: check any booking code before you play it (slide 4)	`/football/code-hub`
8	P8	Code editor: change a code, keep the good legs (slide 5)	`/football/code-hub/editor`
9	P9	A miss, explained: one pick that lost and why the model still stands by the method	`/football/track-record`
10	P10	Track your combos (slide 6)	`/football/combo/tracked`
11	P11	Five habits for smarter staking (slide 7)	`/responsible-use`
12	P12	What the free plan includes	`/pricing`
13	P13	Ask KiqStat: one question, one answer, shown	`/`
14	P14	Two-week recap with the Track screenshot; invite replies (slide 8, end card)	`/`

Captions (draft, 280 characters or fewer)

Square brackets are blanks to fill from the live site on the day. Each ends with its tagged link.

P1 (pinned) > KiqStat shows the chance our model puts on football results, next to the market price, with every settled pick on a public Track page. Chances, not certainties. 18+. Play responsibly. > kiqstat.app/?utm_source=x&utm_medium=pinned&utm_campaign=nov26-test&utm_content=p01

P2 > A 70% chance still loses 3 times in 10. That is not the model failing, it is what 70% means. KiqStat is built around that: it shows the chance, you decide what to do with it. > [link p02]

P3 > Every pick we have settled, wins and losses, on one page. No deleted tweets, no "we only post winners". Check it before you trust us: [link p03]

P4 > The model says [Team A] have a [x]% chance. The market price implies [y]%. When those two disagree, that is the interesting bit. Market check shows you the gap. [link p04]

P5 > Building a combo? Each leg multiplies the risk. Forge shows the real chance of the whole slip, not just the odds. Try 3 legs, then 6, and watch what happens. [link p05]

P6 > [Match], [day] [time]. Model chances: [home]% / [draw]% / [away]%. Full breakdown and the reasons behind it on the match page. A view, not a guarantee. 18+ [link p06]

P7 > Got a booking code from a friend or a group? Paste it into Code Hub and see the model's chance for every leg before you play it. [link p07]

P8 > One bad leg in an otherwise good code? Code editor lets you swap or drop it and rebuilds the code. Keep what you like, change what you do not. [link p08]

P9 > We missed [match]: the model had [x]% on [outcome] and it did not land. Here is the pick as we posted it and the result. Misses are part of every record; the Track page has all of them. [link p09]

P10 > Save your combos and let KiqStat track them as the games finish. You see how you did over weeks, not just tonight. [link p10]

P11 > Five habits that matter more than any pick: set a limit before you start, never chase a loss, stake the same small amount, keep a record, take days off. 18+ [link p11]

P12 > Free on KiqStat: every match and live score, the settled track record, picks in [27] competitions, 3 Ask KiqStat questions a day, and the morning picks alert. No card needed. [link p12]

P13 > Ask KiqStat: "[a real question a user asked]". The answer, with the numbers behind it. Free users get 3 questions a day. [link p13]

P14 > Two weeks of posting with the Track page open the whole time. [x] settled picks, [y]% landed. Tell us what to show more of. kiqstat.app 18+ [link p14]

Before posting P3, P9 and P14: take the screenshot and numbers from the Track page that day, and use those figures. P12's competition count is read from `/pricing`.

Tagged-link bookkeeping

- The bio link is `utm_medium=bio&utm_content=profile`; set once.
- A post's link is made the same way every time; no shortening service in between (a shortener hides the referrer and the tags can be stripped).
- X wraps links in `t.co`. The tag still arrives; Traffic will show these as `x / post`, `x / pinned`, etc., separate from the untagged `t.co` row (those are earlier, untagged links).

- Do not tag links to anywhere other than our own site.

What 4.5 will look at

At **48 hours** (after P2) and **7 days** (after P7), I read Admin → Traffic → KiqStat signups, filtered to campaign `nov26-test`:

Measure	Why
Signups per post (`utm_content`)	which topic pulls people in
Came back (returned after signup)	whether they were people or one-visit clicks
Payers and naira from x accounts	the only number that decides whether to keep going
Share of x signups from tagged vs untagged links	whether tagging is being done

Baseline to beat: 16 signups and 1 payer from X in all time before this test. I will report the result as it is, including if it is nothing.

What I need from the founder

1. Approval or edits on the 14 captions (anything cut should be removed, not softened).
2. The regulator and platform advertising check mentioned in rule 6.
3. Confirmation that the X profile can carry the bio link and a pinned post.
4. The 9-slide carousel images, if they should be attached to the marked days (I can only draft the words).
5. The week's fixtures worth posting about for P6 (or tell me which league to default to).
6. A decision on whether to post from a single account or also a personal founder account (different tone, same tagged links).
